**Amazon.com: Customer reviews: Apocalypse 2012: A—**

APOCALYPSE 2012: A SCIENTIFIC INVESTIGATION INTO CIVILIZATION'S END comes from a journalist who pinpoints 2012 as the year of ultimate doom for the human race—based on a blend of ancient records, including a Mayan calendar which ceases its forecasts in 2012, and Eastern and Western religions which point to this year as the end of time.

**Apocalypse 2012— Free Online Library**

In Apocalypse 2012, Lawrence E. Joseph reveals the curious fact that 2012 has been pinpointed as a pivotal, perhaps cataclysmic, year in human history by ancient sources and contemporary science alike.

Our digital library spans in multiple locations, allowing you to get the most less latency time to download any of our books like this one.

**Apocalypse 2012: A Scientific Investigation into—**

According to the Mayans, 2012 marks the end of this particular civilization - make of that what you will. But this book is not only about the Mayans - it's about the possible ramifications of observed earth changes, global warming, solar changes and meteors - all scientifically validated as far as I know from my own research.

**Listen Free to Apocalypse 2012: A Scientific Investigation—**

November 13, 2006 In New Age circles, the idea that some sort of world-spanning cataclysmic event will take place in December 2012 has been gaining traction for years, thanks largely to the calculations of ancient Mayan astronomers who pegged that moment as the end of a cycle of eons. Joseph uses that prophecy as a starting point, but claims that his interest lies in more substantial scientific threats to the planet—including cracks in Earth's magnetic field, the eruption of supervolcanoes ...

**Apocalypse 2012— Qatar National Library**

The guest in the wee hours that February morning was Lawrence E. Joseph, the author of "Apocalypse 2012" -- billed as "a scientific investigation into civilization's end" -- and he came on the air to tell the story of how the ancient Maya looked into the stars and predicted catastrophic changes to the earth, all pegged to the end date of an ...

**Apocalypse 2012: An Investigation into Civilization's End—**

Apocalypse 2012: A Scientific Investigation into Civilization's End. By: ... I found this an interesting but skewed review of some of the 2012 theories. Rather than a true scientific review, I think it was definitely advocating the legitimacy of the 2012 apocalyptic ideas. Not to say that they may not be valid, which we will soon find out.

"Updated to include dramatic new evidence from NASA and the National Academy of Sciences pointing to a knockout of the electrical power grid by solar systems expected to climax in 2012-2013." Don't look up! It won't help. You can't get out of the way, you can't dig a hole deep enough to hide. The end is coming, and there's nothing you can do about it. So why read this book? Because you can't look away when not just the religious fanatics are saying we're all going to be destroyed but the scientists are in on the act too. Here's what they're saying: We're a million years over due for a mass extinction. The sun at radiation minimum is acting much worse than at solar maximum, and one misdirected spewing of plasma could fry us in an instant. The magnetic field—which shields us from harmful radiation—is developing a mysterious crack. Our solar system is entering an energetically hostile part of the galaxy. The Yellowstone supervolcano is getting ready to blow, and if it does, we can look forward to nuclear winter and 90 percent annihilation. The Maya, the world's greatest timekeepers ever, say it's all going to stop on December 21, 2012. So, see? There's nothing you can do, but you might as well sit back and enjoy the show. You'll get a good chuckle. That's why you should read this book.

In his celebrated previous book, Apocalypse 2012: An Investigation Into Civilization's End, Lawrence E. Joseph appraised the likelihood of planet-wide catastrophe in 2012 by presenting convincing scientific evidence of looming chaos and even mass extinction. Now, in AFTERMATH: A Guide to Preparing For And Surviving Apocalypse 2012 he answers the most pressing question to arise from the investigation: What can we do to mitigate the coming cataclysm? Here Joseph presents the latest findings about the threats to our life on earth – including an all-out collapse of power grids and satellite systems resulting from solar flares expected to climax with unprecedented ferocity in 2012. Incipient plagues, famines, droughts and runaway global warming are also assessed for their catastrophic potential. When it comes to formulating a response to an impending apocalypse, the field of options is narrow, but Joseph argues that there is plenty of constructive action that can be taken at the personal, local, national, and global level, individually and collectively, to prepare for, endure and emerge from disaster. And Joseph takes readers beyond the end-of-the-world mania of the "Apoca-freaks," by offering visions of the post-apocalyptic future, ranging from the Enlightened Age the Maya foresaw to a re-drawn geopolitical map that could result from global upheaval. Authoritative and written with Joseph's trademark lighthearted skepticism and wit, AFTERMATH brings together investigative reportage from sources ranging from NASA and National Academy of Sciences to a shaman conclave in Siberia, to the Cave of the Apocalypse in Patmos, Greece, where the book of Revelation was written, plus historical research and scenario planning to offer pragmatic advice about how to control the damage should the world as we know it end in 2012.

At a time when it is clear that climate change adaptation and mitigation are failing, this book examines how our assumptions about (valid and usable) knowledge are preventing effective climate action. Through a cross-disciplinary, empirically-based analysis of climate science and policy, the book situates the failures of climate policy in the cultural history of prediction and its interfaces with policy. Fava calls into question the current interfaces between scientific research and climate policy by tracing multiple connections between modelling, epistemology, politics, food security, religion, art, and the apocalyptic. Demonstrating how the current domination of climate policy by models and scenarios is part of the problem, the book examines how artistic practices are a critical location to ask questions differently, rethink environmental futures, and activate social change. The analysis starts with another moment of climatic change in recent western history: the overlap of the Little Ice Age and the "scientific revolution," during which intense climatic, scientific and political change were contemporary with mathematical calculation of the apocalypse. Dealing with the need for complex answers to complex and urgent questions, this is essential reading for those interested in climate action, interdisciplinary research and methodological innovation. The empirical analyses amount to a methodological experiment, across history of science, theology, art theory and history, architecture, future studies, climatology, computer modelling, and agricultural policy. This book is a major contribution to understanding how we are precluding effective climate action, and designing futures that resemble our worst nightmares.

21 December 2012 was believed to mark the end of the thirteenth B'ak'tun cycle in the Long Count of the Mayan calendar. Many people believed this date to mark the end of the world or, at the very least, a shift to a new form of global consciousness. Examining how much of the phenomenon is based on the historical record and how much is contemporary fiction, the book explores the landscape of the modern apocalyptic imagination, the economics of the spiritual marketplace, the commodification of countercultural values, and the cult of celebrity.

Science journalist and futurist Lawrence Joseph has studied the unprecedented solar storms since the last ice age and in Solar Cataclysm he reveals the monumental ecological, biological, emotional, political, financial, and cultural effects they have had in the past, and will ultimately have on humanity's future. This timely, fascinating, and relevant book from the bestselling author of Apocalypse 2012 sounds an intelligent and urgent warning about the possible catastrophic consequences we will face in the coming years if we don't listen to what the sun is trying to tell us. Popular science fans who made The World Without Us a runaway bestseller, readers open to new angles on history like those presented in Guns, Germs, and Steel, and anyone who is concerned about tomorrow and what we can do to ensure humankind's survival must read Solar Cataclysm.

Examines the cultural implications of society's declining appreciation and recognition of common sense while exploring the process by which the concept is learned

Every generation of people think that their problems are the most important ever. As history flows without interruption and doomsday scenarios fail, the following generations focus on their own contemporary events, ignoring or underestimating the past. In this way people always see "signs" in their times and the end of the world is constantly a fresh subject.

A fusion of ecological restoration and sustainable development, restorative redevelopment represents an emerging paradigm for remediating landscapes. Rather than merely fixing the broken bits and pieces of nature, restorative development advocates the reuse of devastated landscapes to improve the value and livability of a location for humans at the same time as effectively reinstating natural processes and functions. Restorative Redevelopment of Devastated Ecocultural Landscapes explores the use of this approach to address the long-term, sustainable reparation of the fabled marshlands of southern Iraq destroyed by Saddam Hussein, as well as numerous examples of other ecologically sensitive regions. Case studies presented include: Southern marshlands Iraq Hula swamp, Israel Azraq Oasis, Jordan Las Vegas Wash, USA Xochimilco, Mexico Pantanal, Brazil Clark County Wetlands Park, USA Tonle Sap, Cambodia Lake Titicaca, Peru Nature Reserves, Jordan The book reviews successfully-implemented and celebrated case studies from more than 15 countries around the world which, either in whole or in part, can offer valuable insight into the restorative development of the Iraqi marshlands as well as other devastated ecocultural landscapes. It presents practical approaches for sustaining the process of restoration efforts, both during and after the reparation work has been accomplished. The editor suggests solutions targeted for Iraq but that also have resonance in other regions devastated by conflict and natural disasters. He takes a synoptic or cross-system approach to problem solving when repairing large-scale landscapes that have been devastated by conflict or natural disasters such as tsunami-damaged Indonesia and earthquake-ravaged Haiti.

"[The] weird, beautiful, unapologetically apocalyptic Last Policeman trilogy is one of my favorite mystery series."—John Green, author of The Fault in Our Stars and Paper Towns Winner of the 2013 Edgar® Award Winner for Best Paperback Original! What's the point in solving murders if we're all going to die soon, anyway? Detective Hank Palace has faced this question ever since asteroid 2011GV1 hovered into view. There's no chance left. No hope. Just six precious months until impact. The Last Policeman presents a fascinating portrait of a pre-apocalyptic United States. The economy spirals downward while crops rot in the fields. Churches and synagogues are packed. People all over the world are walking off the job—but not Hank Palace. He's investigating a death by hanging in a city that sees a dozen suicides every week—except this one feels suspicious, and Palace is the only cop who cares. The first in a trilogy, The Last Policeman offers a mystery set on the brink of an apocalypse. As Palace's investigation plays out under the shadow of 2011GV1, we're confronted by hard questions way beyond "whodunit." What basis does civilization rest upon? What is life worth? What would any of us do, what would we really do, if our days were numbered? Ebook contains an excerpt from the anticipated second book in the trilogy, Countdown City.

Most ancient cultures speak of a time when their GODS visited them. They never say their GODS came from across the ocean, or from the mountains. They always came down from the skies. Was ancient man visited by GODS or Extraterrestrials? Knowledge Apocalypse ("lifting of the veil" or "revelation") is a disclosure of something hidden from the majority of mankind in an era dominated by falsehood and misconception, i.e. the veil to be lifted.
