Glatthorn's (1980) analysis of the curriculum into mastery, organic, and enrichment elements might be described as a basic theory. The Second Edition of Curriculum Theory: Conflicting Visions and Enduring Concerns by Michael Stephen Schiro presents a clear, unbiased, and rigorous description of the major curriculum philosophies that have influenced educators and schooling over the last century. The author analyzes four educational visions—Scholar Academic, Social Efficiency, Learner Centered, and Social Reconstruction—to enable readers to reflect on their own educational beliefs and more productively interact with educators who might hold different beliefs.

'This book will be of interest to educational practitioners, and many other professionals concerned with the education and development of the young' - ESCalate 'A very well-respected book [and a] Curriculum classic...[which offers] balance to current official publications...One of its strengths is the coherent argument that runs throughout. It is very much a product of the wide knowledge and experience of the author.' - Jenny Houssart, Senior Lecturer, Department of Learning, Curriculum & Communication, Institute of Education, University of London, UK Praise for previous editions: 'I use this book as an essential course text for a module on curriculum theory. It is an excellent text for the whole course' 'Vic Kelly's writing is always concise and informative, but also at times challenging' 'A most comprehensive text that takes the reader beyond content/balance issues values, beliefs and assumptions on the curriculum' This is the sixth edition of a book that has been regularly revised and updated since it was first published in the mid-1970s. A V Kelly's now classic work focuses on the philosophical and political dimensions of curriculum, and especially on the implications for schools and societies of various forms of curriculum. The book outlines what form a curriculum should take if it is concerned to promote a genuine form of education for a genuinely democratic society. Kelly summarises and explains the main aspects of curriculum theory, and shows how these can and should be translated into practice, in order to create an educational and democratic curriculum for all schools at all levels. The book also seeks to show that the politicization of the school curriculum has led to the establishment of policies and practices which demonstrate a failure to understand these principles of curriculum theory and practice. As a result, policies and practices have been implemented which fall short of being adequate. In view of the rapid pace of educational change imposed by various governments over the last 35 years, including New Labour, this book is more relevant than ever.

This updated second edition of Curriculum: From Theory to Practice provides an introduction to curriculum theory and how it relates to classroom practice. Wesley Null builds upon recent developments while at the same time continuing to provide a unique organization of the curriculum field into five traditions: systematic, existential, radical, pragmatic, and deliberative. Null discusses the philosophical foundations of curriculum as well as

historical and contemporary figures who have shaped each curriculum tradition. To ensure breadth and scope, Null has expanded this second edition to include figures not present in the first. Additionally, after a chapter on each of the five perspectives, Null presents case studies that describe realistic and specific curriculum problems that commonly arise within educational institutions at all levels. Scholars and practitioners alike are given opportunities to practice resolving curriculum problems through deliberation. Each case study focuses on a critical issue such as the implementation of curriculum standards, the attempt to reform core curriculum within universities, and the complex practice of curriculum making. In the final chapter, Null offers a vision for the curriculum field that connects curriculum deliberation with recent developments in moral philosophy.

This primer for teachers (prospective and practicing) asks readers to question the historical present and their relation to it, and in so doing, to construct their own understandings of what it means to teach, to study, to become "educated" in the present moment. Curriculum theory is the scholarly effort - inspired by theory in the humanities, arts and interpretive social sciences - to understand the curriculum, defined here as "complicated conversation." Rather than the formulation of objectives to be evaluated by (especially standardized) tests, curriculum is communication informed by academic knowledge, and it is characterized by educational experience. Pinar recasts school reform as school deform in which educational institutions devolve into cram schools preparing for standardized exams, and traces the history of this catastrophe starting in 1950s. Changes in the Second Edition: Introduces Pinar's formulation of allegories-of-the-present - a concept in which subjectivity, history, and society become articulated through the teacher's participation in the complicated conversation that is the curriculum; features a new chapter on Weimar Germany (as an allegory of the present); includes new chapters on the future, and on the promises and risks of technology.

"Teacher Empowerment through Curriculum Development: Theory into Practice encourages the empowerment and involvement of teachers in the curriculum development process. This updated third edition is a must for every teacher who acknowledges the need for empowerment and wishes to contribute to the process of curriculum development in a changing South Africa." --Book Jacket.

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

This book explores the complexities of curriculum studies by taking into account African perspectives of curriculum theory, curriculum theorising and the theoriser. It provides alternative pathways to the curriculum discourse in Africa by breaking traditions and experimenting on alternative approaches.
