The insurance industry is rebounding from its poor financial results of a few years ago. Better risk management, higher premiums and increased use of underwriting information systems have led the way. Meanwhile, the insurance industry is increasingly globalized as cross-border investments and acquisitions continue at a rapid pace. Risk analysis has become more sophisticated. In addition, a large number of related services and technologies have a major influence on the insurance and risk management business. These services include e-commerce, call centers and information technologies. This carefully-researched book (which includes a database of leading companies on CD-ROM) is a complete insurance market research and business intelligence tool-- everything you need to know about the business of insurance and risk management, including Property & Casualty insurers; Life insurers; Personal Lines and Specialty Lines underwriters; Annuities; Reinsurance underwriters; Health Insurance; Globalization of the insurance industry; Insurance brokers; Consulting; and Online insurance trends. The book includes dozens of statistical tables, an industry glossary, a database of industry associations and professional organizations, and our in-depth profiles of more than 300 of the world's leading insurance companies, both in the U.S. and abroad.

Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Insurance and risk management make up an immense, complex global industry, one which is constantly changing. Competition continues to heat up, as mergers and acquisitions create financial services mega-firms. As the insurance industry grows more global, underwriters see huge potential in China, the world's fastest-growing business market. Meanwhile, technology is making back-office tasks easier and more efficient, while direct selling and e-commerce are changing the shape of the insurance industry. This carefully-researched book (which includes a database of leading companies on CD-ROM) is a complete insurance market research and business intelligence tool-- everything you need to know about the business of insurance and risk management. The book includes our analysis of insurance and risk management industry trends, dozens of statistical tables, an industry glossary, a database of industry associations and professional organizations, and our in-depth profiles of more than 300 of the world's leading insurance companies, both in the U.S. and abroad.

Everything you need to know about the business of insurance and risk management--a powerful tool for market research, strategic planning, competitive intelligence or employment searches. Contains trends, statistical tables and an industry glossary. Also provides profiles of more than 300 of the world's leading insurance companies--includes addresses, phone numbers, and executive names.

This chapter is organized as follows. The economic problem on which this book focuses is motivated in Section 1. The two tools used to study this economic problem, which are real options theory and game theory, are discussed in Sections 2 and 3, respectively. Section 4 surveys the contents of this book. In Section 5 some promising extensions of the research presented in this book are listed. 1. TECHNOLOGY INVESTMENT Investment expenditures of companies govern economic growth. Especially investments in new and more efficient technologies are an important determinant. In particular, in the last two decades an increasing part of the investment expenditures concerns investments in information and communication technology. Kriebel, 1989 notes that (already) in 1989 roughly 50 percent of new corporate capital expenditures by major United States companies was in information and communication technology. Due to the rapid progress in these technologies, the technology investment decision of the individual firm has become a very complex matter. As an example of the very high pace of technological improvement consider the market for personal computers. IBM introduced its Pentium personal computers in the early 1990s at the same price at which it introduced its 80286 personal computers in the 1980s. Therefore it took less than a decade to improve on the order of twenty times in terms of both speed and memory capacities, without increasing the cost (Yorukoglu, 1998).

Hoover's Handbook of Private Companies covers 900 nonpublic U.S. enterprises including large industrial and service corporations.
