2017-18 NFHS BASKETBALL RULES BOOK ROBERT B. GARDNER, Publisher Theresia Wynns, Editor NFHS Publications To maintain the sound traditions of this sport, encourage sportsmanship and minimize the inherent risk of injury, the National Federation of State High School Associations writes playing rules for varsity competition among

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

Provides information on how cheerleading has evolved from a sideline support team to a highly competitive team sport with its own competitions.

Diehard baseball fans--take the challenge! Turn your baseball cap into a thinking cap, and test your knowledge of the game with over 980 brain-twisting questions about the big hits and amazing feats that occurred over the last 100 years: Who is the only pitcher in baseball history with two grand slams in one game? Who was the first National Leaguer to hit 50 home runs in two seasons? Even those who strike out on a few questions will relish these fascinating facts and insider's trivia!

Umpire mechanics, field umpire mechanics, and two-, three-, and four-umpire mechanics. Also included are real-life cases that demonstrate correct rulings, point out common umpiring errors and how to avoid them, and challenge you to make the right call in game situations. Officiating Baseball is not a rules book; it's a practical resource on applying the rules and umpiring mechanics developed and approved by the NFHS. Book jacket.

School-aged children in the U. S. and other Western nations spend almost half of their waking hours in leisure activities. For some, out-of-school time is perceived as inconsequential or even counterproductive to the health and well-being of young persons. Recently, however, there has been a growing recognition that--along with family, peers, and school--the organized activities in which some youth participate during these hours are important contexts of emotional, social, and civic development. They provide opportunities for young persons to learn and develop competencies that are largely neglected by schools. At the same time, communities and national governments are now channeling considerable resources into creating organized activities for young people's out-of-school time. This volume brings together a multidisciplinary, international group of experts to provide conceptual, empirical, and policy-relevant advances in research on children's and adolescents' participation in the developmental contexts represented by extracurricular activities, and after-school and community programs. Organized Activities as Contexts of Development provides a handbook-like coverage of research in this new emerging field. It considers a broad developmental time-span from middle childhood through early adulthood, providing information on how motivation, participation, and developmental experiences change as youth get older. The contents cover one of the most salient topics in child and adolescent research, education, and social policy, placing consistent emphasis on developmental aspects and implications of organized activity participation for young persons. Representing contributors from several fields of study--psychology, criminal justice, leisure science, sociology, human development, education, prevention, and public policy--the book is designed to appeal to students and scholars in all these areas. Additionally, the volume is written to be of interest to professionals who administer programs and develop policy on youth.

So You Think You Know Football? is the motherlode of NFL rules and their interpretations. Whether you know everything about on- and off-field rules or are a true novice, Austro deftly illustrates the ins and outs of the NFL rulebook using examples from actual games. Test your inner referee with questions about the correct call and how slight changes might affect the ruling. Do you know why spiking the ball immediately to stop the clock is not considered intentional grounding, while hesitating a few seconds then spiking the ball is? See if you would have made the right call in a game played between the Chicago Bears and Oakland Raiders on November 27, 2011--with additional quiz questions from other games involving similar controversies. Keep this book right next to your favorite football-watching chair to consult during the game and visit ThinkYouKnowFootball.com to stay updated on interpretations affected by rule modifications.

The only text to focus exclusively on heat-related illnesses. Full of practical advice for professionals in a variety of medical, academic, & commercial settings. Learn how to identify, treat & prevent exertional heat illnesses & ensure your sporting events are safe.

This book is designed as a comprehensive educational resource not only for basketball medical caregivers and scientists but for all basketball personnel. Written by a multidisciplinary team of leading experts in their fields, it provides information and guidance on injury prevention, injury management, and rehabilitation for physicians, physical therapists, athletic trainers, rehabilitation specialists, conditioning trainers, and coaches. All commonly encountered injuries and a variety of situations and scenarios specific to basketball are covered with the aid of more than 200 color photos and illustrations. Basketball Sports Medicine and Science is published in collaboration with ESSKA and will represent a superb, comprehensive educational resource. It is further hoped that the book will serve as a link between the different disciplines and modalities involved in basketball care, creating a common language and improving communication within the team staff and environment.

Young children and even infants work hard at mastering various skills and show spontaneous pleasure at their own accomplishment. John Nicholls explores the conditions that cause students to lose their unconscious involvement in a game or task and become concerned with how they are stacking up against others. Charting the development of children's concepts of luck, effort, and ability, he argues that with age they are increasingly prone to take superiority over others as the definition of success. An emphasis on interpersonal competition, which permeates Western society, exacerbates this egotistical tendency and results in diminished accomplishment and alienation from school. To overcome these problems, Nicholls argues, we must "become as little children" for whom absorption in exploration and accomplishment come naturally, even when those around them are more competent. This ideal is unlikely to be promoted through technical approaches to education, or by the current emphasis on the role of education in economic development. Instead, Nicholls calls for a progressive approach to education. Difficult though it is to implement, this approach is most likely to increase equality of motivation for intellectual development, substantial accomplishment, satisfaction in work, and more productive relations with others. These are important ideas for anyone interested in achievement motivation, for those professionally involved in education, and for nonspecialists interested in, or worried about, how we educate our children.
