Graphing a Logarithmic Function A

Graph $f(x) = \log_3 x$. SOLUTION Step 1 Find the inverse of f . From the definition of logarithm, the inverse of $f(x) = \log_3 x$ is $f^{-1}(x) = 3^x$.

Logarithmic Functions

When the function is shifted left (3) units to $(g(x)=2^{\{x+3\}})$, the y -intercept becomes $((0,8))$. This is because $(2^{\{x+3\}}=(8)2^x)$, so the initial value of the function is (8) . This is because $(2^{\{x+3\}}=(8)2^x)$, so the initial value of the function is (8) .

Natural Logarithms. Defn. of the

Natural Logarithmic Function From the

defn., you can see that $\ln x$ is positive

for $x > 1$ and negative for $0 < x < 1$.

Definition of e The letter e

denotes the positive real number such

Access Free Section 6.3 Logarithmic Functions that $\ln e = 1$ and $e^1 = e$.

6.3 Logarithmic Functions - Logarithmic Functions Section ...

What about the logarithm function?
This too is hard, but as the cosine
function was easier to do once the
sine was done, so the logarithm is

Access Free Section 6 3 Logarithmic Functions

easier to do now that we know the derivative of the exponential function. Let's start with $(\log_e x)$, which as you probably know is often abbreviated $(\ln x)$ and called the "natural logarithm" function.
