Title / Author Type Language Date / Edition Publication; 1. Thinking connections : concept maps for life science. Book A1: 1.

The concept maps contained in this book (for grades 7-12) span 35 topics in life science. Topics were chosen using the National Science Education Standards as a guide. The practice exercise in concept mapping is included to give students an idea of what the tasks ahead will be in content rich maps. Two levels of concept maps are included for each topic so that teachers can easily differentiate their assignments. The structure, features, and notations of concept maps are fully explained. Map topics relate to cell biology, plant biology, animal biology, and human biology. (Author/DDR)

An expert guide to the development of the middle school model as the best educational environment designed to address students' developmental and social needs as well as educational needs. * Learning activities for all instructional strategies including differentiated instruction, inquiry-based and concept-based education, critical thinking and problem-solving strategies, the use of multiple intelligences, learning styles and cultural congruence, and cooperative learning * Planning guides and step-by-step presentations of academic service-learning, which connects the classroom to the community

Stories give life and substance to scientific methods and provide an inside look at scientists in action. Case studies deepen scientific understanding, sharpen critical-thinking skills, and help students see how science relates to their lives. In Science Stories, Clyde Freeman Herreid, Nancy Schiller, and Ky Herreid have organized case studies into categories such as historical cases, science and the media, and ethics and the scientific process. Each case study comprises a story, classroom discussion questions, teaching notes and background information, objectives, and common misconceptions about the topic, as well as helpful references. College-level educators and high school teachers will find that this compilation of case studies will allow students to make connections between the classroom and everyday life.

True believers and skeptics beware: what you know about science may be wrong. Science commentators
