Binary covalent compounds are compounds made up of only two elements, such as carbon dioxide. Prefixes are used in the names of binary compounds to indicate the number of atoms of each nonmetal present. The following table lists the most common prefixes for binary covalent compounds. In general, the prefix mono- is rarely used.

deca-. The rules for using the prefix system of nomenclature of binary compounds can be summarized as follows. Generally, the less-electronegative element is written first in the formula, though there are a few exceptions. Carbon is always first in a formula and hydrogen is after nitrogen in a formula such as NH 3.

7.11: Naming Binary Molecular Compounds - Chemistry LibreTexts

You learned that naming simple binary ionic compounds is easy. Name the cation first with the element name, then name the anion and add -ide to the end. Naming ionic compounds with transition metals isn ' t too hard either. They are named like the binary compounds, with the cation first, then the anion with -ide added to it, but you have to take into account the variations of the metal ions.
